

FileProtect

Industry-leading digital rights management (DRM) solution with no plugins

Protects any PDF or Microsoft Office filetype

Protect PDF + Office Files

FileProtect provides a secure digital rights management (DRM) wrapper around all your sensitive files, including Adobe PDF and Microsoft Office (Word, Excel, Powerpoint). When a file is downloaded, viewers must login with secure credentials to open the file. You can also grant or restrict access permissions like viewing, editing, and printing.

No Plugins

You're probably used to installing plugins or software in order to view documents secured with digital rights management. With FileProtect, there are no plugins to install or update — it all just works.

Remotely Revoke Access

With the click of a button, you can revoke access to anyone who has downloaded the file. Never worry about having old versions or confidential information floating around outside of your control. When working with outside organizations, FileProtect helps provide peace of mind knowing your files are secured under the strictest standards.

Real-time Analytics

You'll know every time a file is opened, printed, or shared with FileProtect. With instant analytics on your documents, you can know when prospects are interested and when they're not. Quickly follow-up and measure your effectiveness, so you can react and keep your project moving.

Integrations

FileProtect can easily be integrated with any SAML SSO provider. Enterprise-grade security from FileProtect will safeguard documents from getting leaked and ensure you stay compliant. Talk to us today to learn about our custom document security integrations.
